BACKGROUND

SOFTWARE

i) Geotechnical Design Software

GEOSTUDIO

GeoStudio Office 4.0 by Geo-Slope International Ltd consists of three geotechnical engineering softwares:-

a. **SLOPE/W** for slope stability analysis

SLOPE/W is a leading slope stability software product of computing the factor of safety of earth and rock slopes. With SLOPE/W, both simple and complex problems for a variety of slip surface shapes, pore-water pressure conditions, soil properties, analysis methods and loading conditions can be analyzed.

b. **SEEP/W** for ground water seepage analysis

SEEP/W is a finite element software product for analyzing groundwater seepage and excess pore-water pressure dissipation problems within porous materials such as soil and rock. Its comprehensive formulation allows analyses to be considered ranging from simple, saturated steady-state problems to sophisticated, saturated-unsaturated time-dependant problems. SEEP/W can be applied to the analysis and design of geotechnical, civil, hydrogeological, and mining engineering projects.

c. **SIGMA/W** for stress and deformation analysis

SIGMA/W is a finite element software product that can be used to perform stress and deformation analyses of earth structures. Its comprehensive formulation makes it possible to analyze both simple and highly complex problems. For example, a simple linear elastic deformation analysis or a highly sophisticated, nonlinear elastic-plastic effective stress analysis can be performed.

BACKGROUND

SOFTWARE
